

Part 10 – Creating Group Policy Object (GPO), Linking GPO to enterprise, deploying and verifying GPO allocation to enterprise.

Author: Denzel Corson

Date: September 3, 2026

Technologies Used

- Oracle VirtualBox
- Windows Server 2022
- Windows 10 Pro
- Active Directory Domain Services
- Dynamic Host Configuration Protocol
- Group Policy Management

Objective

The objective of this portion of the lab was to establish a Group Policy Object and assign the GPO within the corp.corson.com domain, which will be applied to all users on domain. This lab will simulate account access restrictions from the GPO policy created.

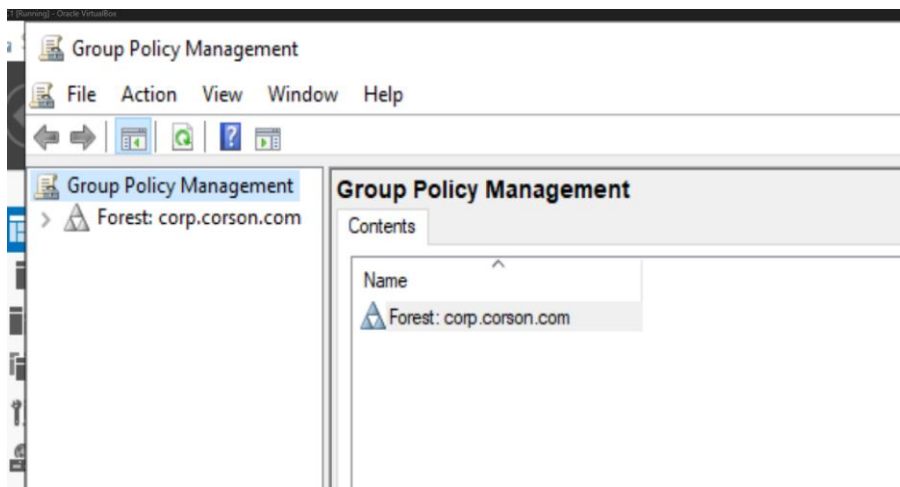

Figure 1. Figure displays the Group Policy Management Forest of the enterprise corp.corson.com. Selecting and expanding on the enterprise will allow creation, editing, and deletion of GPO's pertaining to the corp.corson.com enterprise.

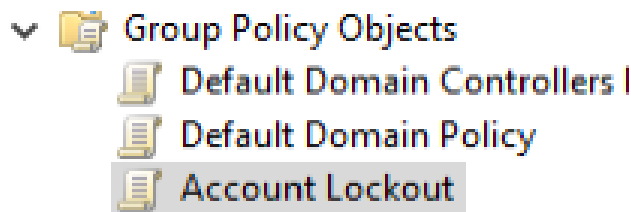

Figure 2. “Account Lockout” Object was created under Group Policy Object Tree.

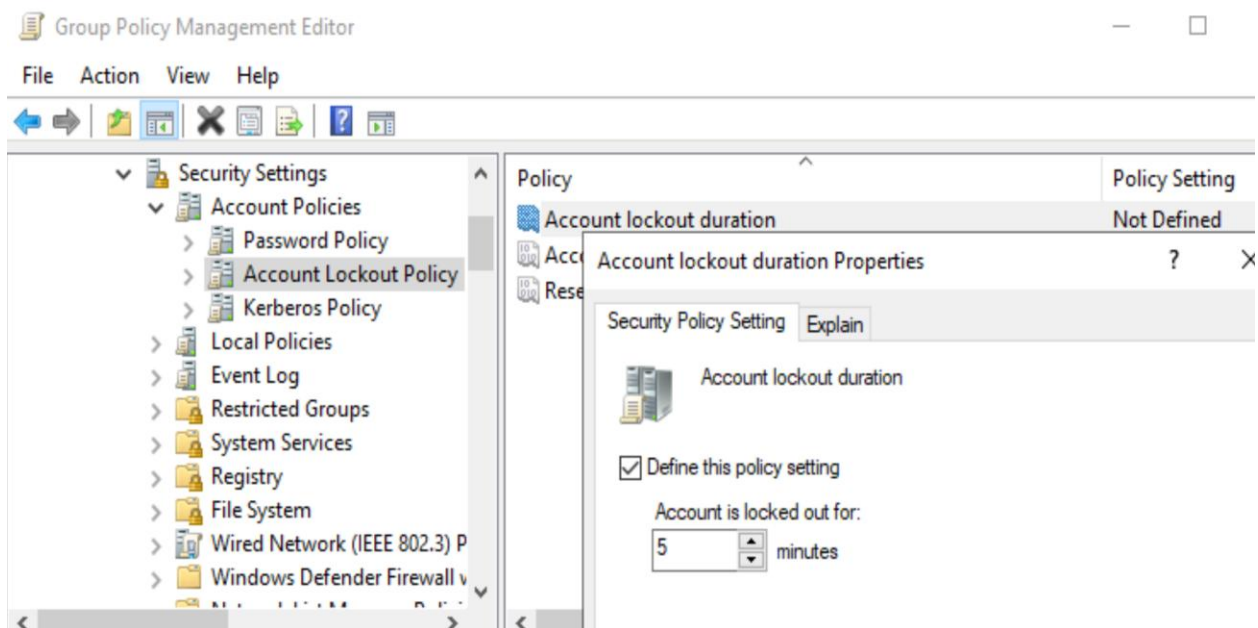

Figure 3. “Account Lockout” GPO is being configured with policies that will define the conditions it will operate under. Example shows that 5 minutes will be placed on account that violates conditions.

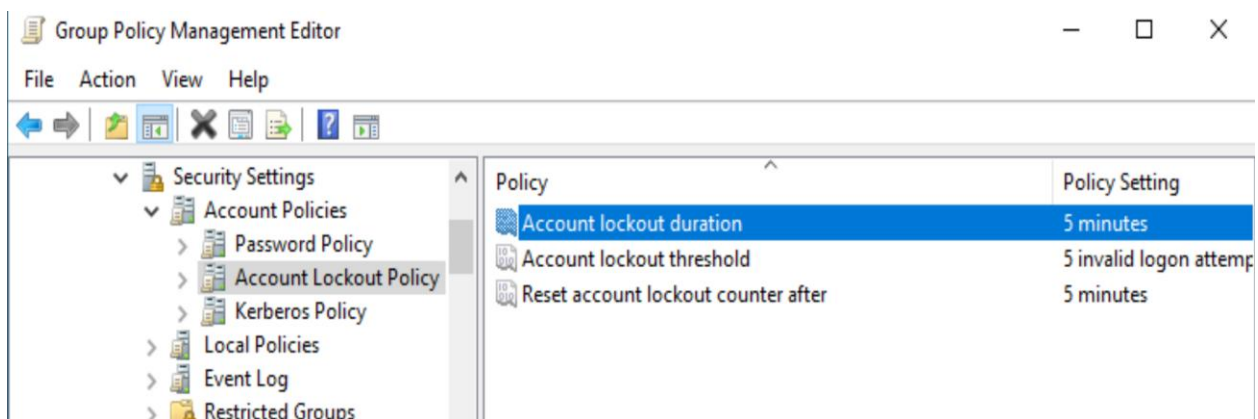

Figure 4. Figure continues defining Account Lockout GPO, example shows that after five invalid user login attempts, account will be locked for 5 minutes.

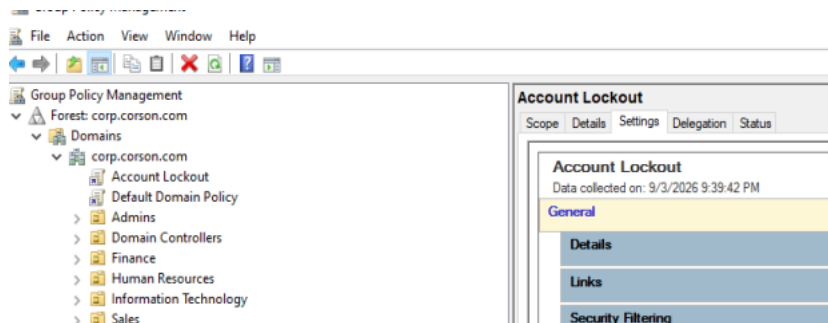

Figure 5. Created “Account Lockout” GPO is linked under the corp.corson.com enterprise, process is configuring lockout policy to globally effect users under the enterprise.

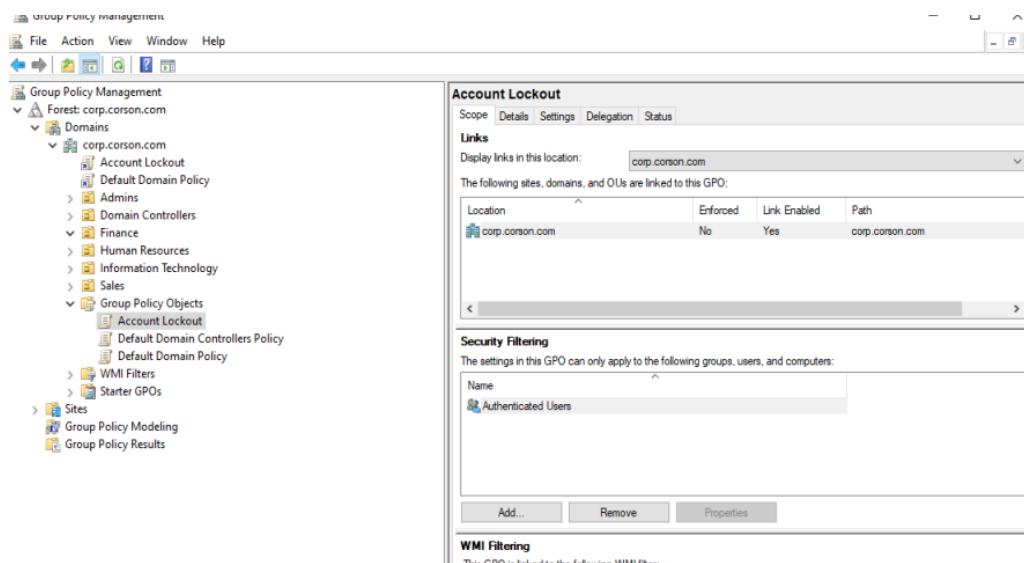

Figure 6. Figure Displays successful verification of corp.corson.com enterprise being linked to the Account Lockout GPO.

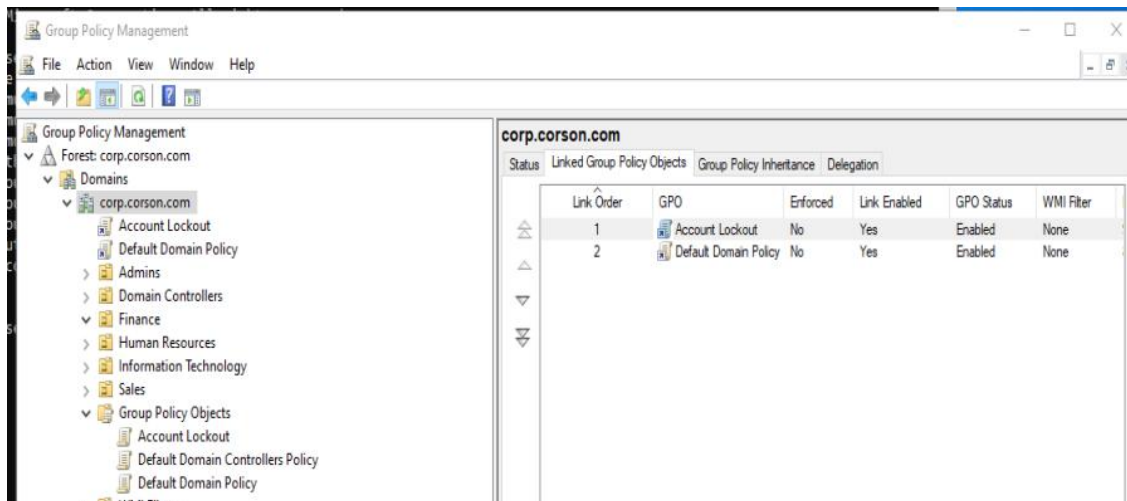

Figure 7. Established Linked Account Lockout GPO precedence is being set as the number 1 priority, allowing the new GPO to take precedence over the default linked Domain policy.

```

C:\Users\A-DCorson>gpupdate /force
Updating policy...

Computer Policy update has completed successfully.
User Policy update has completed successfully.

C:\Users\A-DCorson>net accounts /domain
once user logoff how long after time expires?: Never
minimum password age (days): 1
maximum password age (days): 42
minimum password length: 7
length of password history maintained: 24
lockout threshold: 5
lockout duration (minutes): 5
lockout observation window (minutes): 5
computer role: PRIMARY
The command completed successfully.

```

Figure 8. illustrates the updating of the policies and the newly configured procedures regarding account lockouts after multiple invalid login attempts.

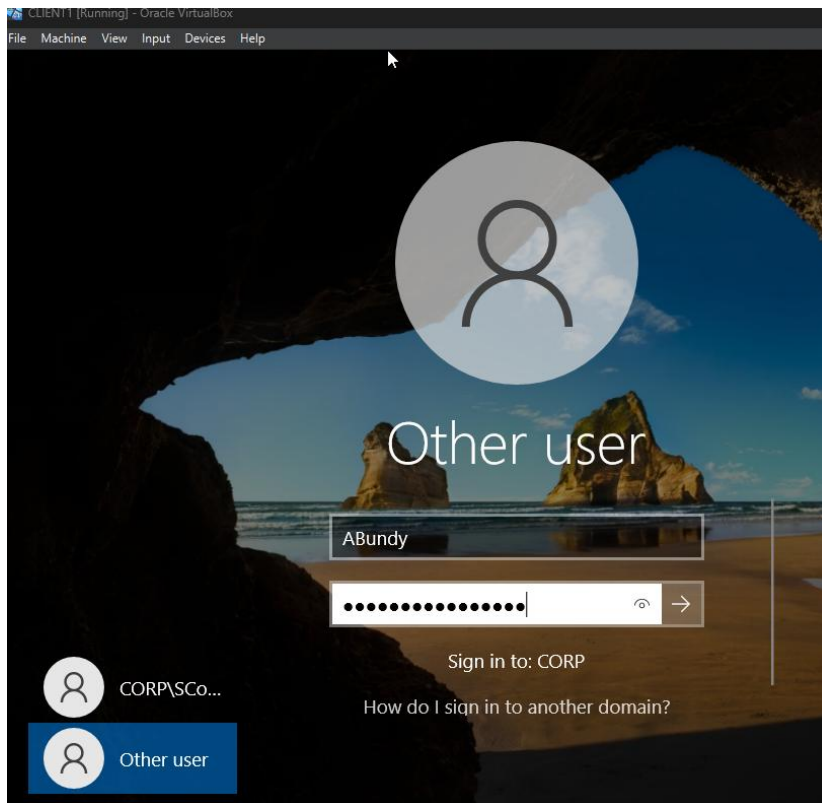

Figure 9. The figure demonstrates User ABundy attempts to login to enterprise on client workstation.

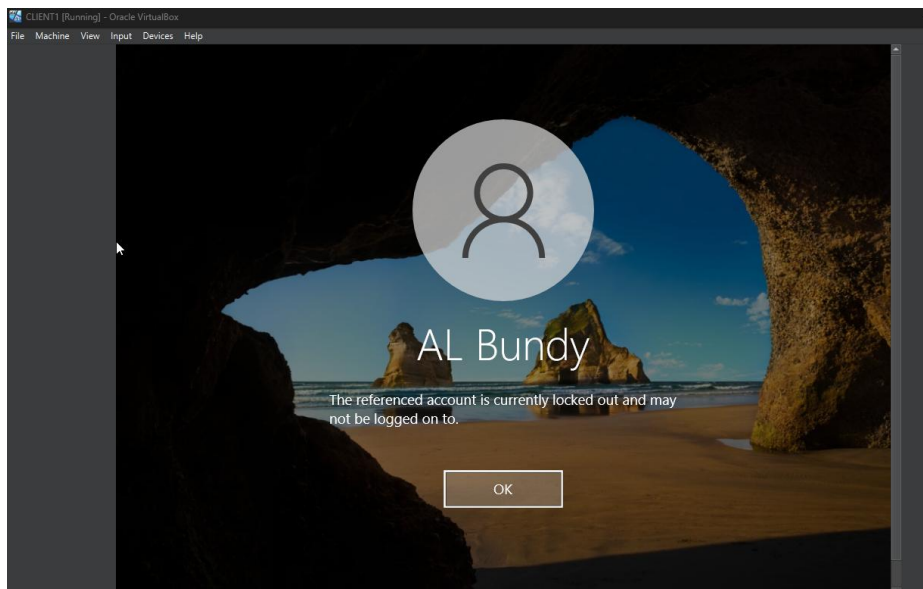

Figure 10. Multiple invalid attempts from User AL Bundy implement Account Lockout GPO, successfully displaying configuration and deployment of Account Lockout GPO for corp.corson.com enterprise.
